## Application

### 1 7708 37
The HERZ-Actuator 230 V with end switch is a thermoelectric valve drive for opening and closing valves and small valves used in the scope of HVAC technology. The integrated micro switch with floating contact allows direct operation of a pump or fan control unit. The HERZ Actuator 230 V with end switch is controlled by a 230 V room thermostat with two-point output or pulse-width modulation.

### Application 1 7708 31, 1 7708 38, 1 7708 39, 1 7708 52, 1 7708 53
The HERZ-Actuator 230 V / 24 V is a thermoelectric valve drive for opening and closing valves on heating circuit distributors of concealed floor heating and cooling systems. The main field of application is the energy-efficient individual room temperature control in the range of building management systems and home automation. The HERZ-Actuator 230 V / 24 V is controlled by a 230 V / 24 V room thermostat with two point output or pulse-width modulation.

### Application 1 7990 31, 1 7990 32
The HERZ-Actuator 2-point, Proportional 5/6.5 mm is a thermoelectric actuator for the control of heating and cooling systems in direct proportion to the applied control voltage. The control of the actuators is performed by a 0-10 V DC signal via a central DDC system or by a room thermostat. Principal area of application is the building management system range.

Furthermore, the variant 1 7990 32 with valve path recognition automatically register the valve path for an optimum use of the active control voltage range. This guarantees an even more precise control of all valves.

### Operation
The actuating drive is switched on via an electrical contact, e.g. from a room thermostat, and starts opening or closing the thermostatic valve. The actuating movement is accomplished by an electrically-heated expansion element. When the heating current is switched off, the valve closes or opens respectively. The HERZ actuating drive is maintenance-free and offers silent operation.
Emergency function

With factory setting “normally closed” the valve can be opened by removing the drive in case of a power failure.

Installation 1 7708 31, 1 7708 37, 1 7708 38, 1 7708 39, 1 7708 52, 1 7708 53

The wide selection of valve adapters guarantees a perfect match of the HERZ-Actuator to almost any valve bottom or manifold available on the market. Simply snap-on the HERZ-Actuator to the manually pre-installed valve adapter.

- First the valve adapter is screwed on the valve manually.
- The HERZ-Actuator is placed vertically on the valve adapter.

![Installation steps]

Installation 1 7990 31, 1 7990 32

The valve adapter assortment guarantees a perfect match of the actuator to almost all valve bottoms and heating circuit distributors available on the market. The HERZ ActuatorProportional is simply plugged on to the valve adapter previously installed manually.

1. Screw the adapter manually onto the valve.
2. Connect the line to the actuator.
3. Position the HERZ Actuator manually in vertical position to the valve adapter.
4. Latch the HERZ Actuator to the valve adapter by manually applied vertical pressure; this can be done noiselessly and without any problems.

Installation position

The HERZ-Actuator must be installed preferably in vertical or horizontal installation position. For “upside down” installation special circumstances (e. g. drainwater) can reduce the lifetime of the actuator.

Room thermostat
Standard room thermostats equipped with a thermal feedback loop can be used for piloting the HERZ actuating drive. If required, several drives can be connected in parallel taking the maximum admissible electrical load of the switch contact into account.

Design and planning notes
When selecting the switch contacts and mains fuses, the inrush current of the heating element must be taken into account. The voltage loss in the electric lines must not exceed 10 %, ensuring that the indicated runtime is guaranteed.

Max. cable length for an actuating drive with given cable cross-sections (information with voltage drop approx. 5 %; at 230 V voltage drop is 10 V, at 24 V voltage drop is 1 V).
When using several actuating drives, the indicated cable length must be divided by the number of actuating drives connected.

Calculation of maximum cable length (copper cable) for 24 V rated voltage
L = C x A / n
L: Cable length in m; K: Constant (269 m/mm²); A: Conductor cross-section in mm²; n: Number of Alpha-Actuators

We recommend the following cables for installing a 24 V system:
Telephone line J-Y(ST)Y 0.8 mm²
Light plastic-sheathed cable: NYM 1.5 mm²
Flat webbed building wire: NYIF 1.5 mm²

Transformer: A safety isolating transformer according to EN 61558-2-6 must always be used. Transformer dimensioning results from the making capacity of the HERZ-Actuators.
Rule-of-thumb formula: P_{transformer} = 7.2 \text{ W} \times n
n = Number of OEM Actuators
