Plastic Water Tanks are ideal for multi-purpose use including storing safe portable drinking water, rainwater harvesting & collection, long term of storage of water, emergency back up at home storage tanks, fire suppression & protection and home or farm irrigation. Our Plastic Storage Tanks will meet your needs.

These water tanks are made from FDA approved polyethylene resins and are safe for human consumption of drinking water. These Plastic Water Tanks are not designed to hold pressure. It is covered with manufacturer warranty. The unique polyethylene construction of these tanks' boosts strength and durability for years of reliable performance.

A special designed lid for the manhole covers threaded type ensures safety of the contents to be free from dust, dirt, smell or any harmful that contaminates.

Layers Specifications

1. Outer Layer of tough white plastic in order to withstand harshest weather conditions.
2. UV Layer provides the tank a resistance against Ultraviolet rays.
3. Form Layer (Compressed sponges) maintains water temperature at a rate lesser than the outside temperature.
4. Smooth Inner Layer for storing water and prevents the growth of bacteria, algae & fungus.
5. An extra Layer (if required) increases the thickness of the tank and help to prevent the growth of bacteria, algae & fungus.

Firm Tanks – These types of tanks are available in 3, 4, & 5 layers which provides as per the customer's requirements and needs. Polyethylene Tank is crack resistant, has an impact strength and stress resistant. The ribs around the tank have been designed to counter Hoop Stress.
